

PowerShell for the DBA from 0-60 in a Day

Instructor: Ben Miller

Course Description

Think of how many servers or instances you maintain. Putting tools in your toolbox becomes a critical part of your life as a DBA. How many clicks can be reused? We will be taking you from 0-60 and everywhere in between with how PowerShell fits into a DBA's day in the life.

We will go from getting PowerShell connected to SQL Server to walking away with a toolbox starter kit that will help you get automated and allow you to focus on harder problems than modifying database options or getting information from SQL Server and storing it away for later analysis. The toolbox alone will make it well worth your attendance. Join me in the quest to become a PowerShell DBA.

About the Instructor

[Ben Miller](#) has been a member of the SQL Server Community since 1996. He is SQL Server Architect and consults full-time. Ben is a SQL Server MVP and MCM: SQL 2008/2012 and has spent time in the field using SQL Server since 1996. He has worked at various companies throughout the US as well as at Microsoft for 7 years, and is passionate about SQL Server and automation and integration. He's also a passionate user of PowerShell and regularly speaks at SQL Saturdays and conferences around the country.
